Last Updated Thursday, 03 January 2008

Applications are invited for a postdoctoral research assistantship at the Department of Physics and Astronomy of the University of Utah. The successful applicant will work with Prof. David Kieda and Prof. Stephan LeBohec on the analysis and interpretation of observations from the VERITAS high-energy gamma ray observatory, as well as on the conception of the next generation experiments. A PhD in astronomy or physics is required, and related experience is highly desirable. Experience in X-ray, soft gamma ray astronomy, and/or observational astronomy would be a plus. The position is for two years starting in 2008, and offers competitive salary and benefits. There is potential for the individual to teach at the University of Utah, if desired.

Applications should include a curriculum vitae, a letter describing experience and interest and arrange to have three letters of reference sent to Heidi Frank, University of Utah, Department of Physics, 115 South 1400 East #201, Salt Lake City, UT 84112-0830. Formal review of applications will begin after February 15, 2008 and will continue until the position is filled. Further information on the group activities can be found on <http://www.physics.utah.edu/gammaray/> or by directly contacting lebohec_at_physics.utah.edu and/or kieda_at_physics.utah.edu.
