Bulletin of the AAS (BAAS), volume 40, number 1, 2008 (20.05)

The TeV blazar, 1ES 2344+514, has been detected by VERITAS, the Very Energetic Radiation Imaging Telescope Array System. It was observed between October 2007 and January 2008, during which time it underwent flaring activity. We report here on the lightcurve and spectrum of 1ES 2344+514.
